

ToutVirtual Announces Support for Microsoft Windows Server 2008 Hyper-V Virtualization

Carlsbad, Calif. – October 27, 2008 – ToutVirtual, an emerging leader in optimization and performance-management software for virtual computing infrastructures, today announced that its VirtuallQ suite of products now also supports Microsoft Windows Server 2008 Hyper-V virtualization.

The VirtuallQ suite of products is designed to support virtual server room operations through three stages of virtualization — design, deploy, and deliver stages — helping users make correct decisions for virtualization optimization along the way. The suite of products allows users to compare how various virtualization platforms, such as Hyper-V, perform running different applications and then provides visibility and policy-based control in managing the Hyper-V based environment. VirtuallQ suite of products supports multiple virtualization platforms for an apple-to-apple comparison and provides all essential decision-making data in a single, integrated web console that is simple to install and use.

ToutVirtual is partnering with Microsoft as an Independent Software Vendor (ISV). Users of Microsoft Windows Server 2008 Hyper-V can get more information about ToutVirtual VirtuallQ at:
<http://www.microsoft.com/windowsserversystem/virtualserver/partners/vhdpartners.msp>

“We are pleased that ToutVirtual is delivering support for Windows Server 2008 Hyper-V,” said Jim Schwartz, Director for Virtualization Solutions at Microsoft Corp. “ToutVirtual’s VirtuallQ products help our customers running Hyper-V assess and optimize applications for their environments, assisting them in making the right planning decisions.”

“ToutVirtual is excited to strengthen its relationship with Microsoft with the support of Windows Server 2008 Hyper-V,” said Vipul Pabari, chief technology officer for ToutVirtual. “Hyper-V users can use our products to compare the performance of applications on multiple virtualization platforms. Whether the user is just getting started in the design phase or further along in deployment or delivering advanced services, VirtuallQ suite of products is simple and cost effective.”

Pricing, Availability and Platforms Supported

About ToutVirtual

ToutVirtual, Inc. is an emerging leader in virtualization system optimization software to manage and automate virtual computing processes and ease the transition from design to deployment. VirtuallQ, the company's flagship product suite, allows organizations to obtain a holistic view and control their virtual infrastructure including servers, applications, storage, and clients independently of the underlying virtual computing platform. Unlike other companies whose products are vendor specific, platform specific, or network tier specific, ToutVirtual software operates across multiple platforms and is multi-tier to prolong product life, protect IT investments, and maximize ROI. Additional information about the company and its products is available at <http://www.toutvirtual.com>.

ToutVirtual and VirtuallQ are registered trademarks or trademarks of ToutVirtual, Inc. All other marks and names mentioned herein may be trademarks of their respective companies.
